DETAILED ACTION

1. Applicant's Preliminary Amendment filed 09/15/2003 has been reviewed and placed of record in the file.

Allowable Subject Matter

2. Claims 1-23 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious an electronic circuit and a method of operating thereof having all exclusive limitations as recited in claims 1, 5, 9, 13, 15, 17, and 20, comprising a first transistor or a driving transistor, a second transistor or an adjustment transistor, a third transistor or a first switching transistor, and a capacitor; wherein a control terminal of the first transistor, a plate of the capacitor, a control terminal of the second transistor and a non-control terminal of the second transistor are all coupled together; or where a conduction state of the driving transistor is determined by a charge in the capacitor, the adjustment transistor sets a control terminal of the driving transistor to a potential prior to transferring a signal to a capacitor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Application/Control Number: 10/621,610
Art Unit: 2818

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Copies of the references are not being furnished with this Office Action per MPEP

§ 707.05(a).

a. U.S. Patent 6,229,506 to Dawson et al. discloses a pixel circuit having four transistors, one of which is a driving transistor, and a capacitor, the capacitor being connected in parallel with the gate and source of the driving transistor, and the source and drain of one of the transistors being connected in parallel with the gate and drain of the driving transistor.

b. U.S. Patent Application Publication 20030011584 by Azami et al. discloses a pixel driving circuit having five transistors and two capacitors, three of the transistors and the two capacitors constituting a compensation circuit.
